Dear Mr. Wayne

(DS)

Software Training (**Grader Note – the subject line may vary**)

(DS)

Thank you for your request for additional training on the software that your company purchased from Professional Business Associates. We are excited that we are able to offer assistance with this training. With representatives in the Dallas, Texas, office we are able to customize a training session just for your company.

Professional Business Associates is very excited to have an opportunity to continue working with Duck Creek Publishing. Enclosed please find a listing of the different options and suggestions customized for your business. You will find several proposals with varying levels of services included. We look forward to hearing from you soon. Please contact me at (800) 698-4582 to discuss the enclosed information further.

(DS)

Sincerely

(QS)

Tom Carlson, Manager
Information Technology Department

Employee Monitoring

(DS)

Employee monitoring involves the use of computers to observe, record, and review an employee's use of a computer, including communications such as e-mail, keyboard activity, and websites visited. Privacy issues for employers and employees have multiplied as computer technology creates many more ways to store, access, and share information. Many computer programs exist that easily allow employers to monitor employees. Further, it is legal for employers to use these programs which can help increase workplace security and employee productivity.

A frequently debated issue is whether an employer has the right to read employee e-mail messages. Actual policies vary widely. Some companies declare that they will review e-mail messages regularly; others state that e-mail messages are private. If a company does not have a formal e-mail policy, it can read e-mail messages without employee notification. One recent survey discovered that more than 73 percent of companies search and/or read employee files, voicemail, e-mail, web connections, and other networking communications. Another claimed that 25 percent of companies have fired employees for misusing communications technology.

Currently, no privacy laws exist relating to employee e-mail (Privacy Laws and Personal Data). The 1986 Electronic Communications Privacy Act provides the same right of privacy protection that covers the postal delivery service and telephone companies to various forms of electronic communications, such as e-mail, voice mail, and cellular telephones. The Electronic

Communications Privacy Act does not cover communications within a company. This is for the reason that any piece of mail sent from an employer's computer is considered company assets.

Several lawsuits have been filed against employers because many people believe that such internal employee communications should be private.

SUBJECT: Computer Internet and Use Policy (**Grade Note: Can be different**)

(DS)

It has come to my attention that our employees are confused about the company's policies regarding the use of electronic resources, including internet access, email, and the use of social networking sites.

I would like to arrange a meeting with you in order to review and revise our existing Computer and Internet Use Policy. A clear distinction needs to be made between work use and personal use. We will also need to address the use of social networking sites. The scope of an internet usage policy is not to snoop on employees or deny them all access rights to the internet whilst at work; however, guidelines and rules need to be formulated to protect employees from being subjected to material that may be inappropriate to a work environment and that could result in legal ramifications. An internet usage policy also aims to educate users about web-borne threats and how irresponsible browsing can result in malicious packages being unknowingly downloaded onto a computer which in turn could infect the whole network.

Attached is the current Computer and Internet Use Policy, and please come to our meeting prepared to make recommendations and changes.
