

# NETWORK ADMINISTRATION USING MICROSOFT® (310)

## NATIONAL – 2019

**Knowledge Test:**

Certification Exam: MTA Networking Fundamentals \_\_\_\_\_ (100 points)

**Objective Test:**

Objective Test: \_\_\_\_\_ (500 points)

***TOTAL POINTS*** \_\_\_\_\_ ***(600 points)*****Failure to adhere to any of the following rules will result in disqualification:**

1. Contestant must hand in this test booklet and all printouts. Failure to do so will result in disqualification.
2. No equipment, supplies, or materials other than those specified for this event are allowed in the testing area. No previous BPA tests and/or sample tests or facsimile (handwritten, photocopied, or keyed) are allowed in the testing area.
3. Electronic devices will be monitored according to ACT standards.

No more than sixty (60) minutes testing time

*Workplace Skills Assessment Program* competition.

**Identify the letter of the choice that best completes the statement or answers the question. Mark A if the statement is True. Mark B if the statement is False.**

1. What utility is the *preferred* method for creating and managing shares within Windows Server 2012?
  - a. Shared Folders MMC snap-in
  - b. File and Storage Services
  - c. Share and Storage Management
  - d. Windows Explorer
2. What policy setting can be used to force synchronous processing?
  - a. Change Group Policy processing to run asynchronously when a slow network connection is detected
  - b. Force synchronous processing before logon
  - c. Always wait for the network at computer startup and logon
  - d. Prevent bypass of synchronous processing
3. If you are experiencing issues reaching a target destination network, and you need to display each hop to the destination, what command should you use?
  - a. Ipconfig
  - b. Ifconfig
  - c. Tracert
  - d. Nslookup
4. You are having an issue with Remote Desktop Protocol (RDP) getting access to DirectAccess clients. Which port must be opened on the client side firewall?
  - a. 587
  - b. 1720
  - c. 3389
  - d. 8080
5. In the New Connection Security Rule Wizard, what option can be used to set up a rule that requires authentication between two computers, between IP subnets, or between a specific computer and a group of computers in a subnet?
  - a. Isolation
  - b. Authentication exemption
  - c. Server-to-server
  - d. Tunnel
6. Carlos has started a new business and needs to setup a network. He will have seven employees that will need to be able to access specific files from each other. The group should be protected from other computers that may access the network. He doesn't want to spend a lot of money on the network and asks you for a recommendation. Which of the following is the best option for Carlos?
  - a. Active Directory
  - b. Windows workgroup
  - c. Windows homegroup
  - d. None of these are correct
7. In what order are policies processed in the Network Policy server?
  - a. Top to bottom
  - b. Bottom to top
  - c. Most strict policy first
  - d. Least strict policy first

8. What tool can be used to determine what policy settings would apply to a computer or user account if it were moved to a different container?
  - a. Resultant Move of Policy
  - b. Group Policy Testing
  - c. Group Policy Modeling
  - d. Group Policy Projection
9. The solution for securing private data traveling over a public network, such as the Internet, is the use of what type of network?
  - a. Public encrypted network
  - b. Virtual private network
  - c. Private encrypted network
  - d. Virtual prevention network
10. What feature within a protocol analyzer identifies the type of packet being examined and labels the packet's components correctly?
  - a. Frame
  - b. Protocol
  - c. Parser
  - d. Tracer
11. A valid reverse lookup zone consists of the network ID's octets in reverse order, with what at the end of the name?
  - a. arpa
  - b. in-addr.arpa
  - c. rlz.arpa
  - d. in-addr.ptr
12. What type of DNS query causes a DNS server to respond with the best information it currently has in its local database?
  - a. Recursive query
  - b. Local query
  - c. Extended query
  - d. Iterative query
13. How should an administrator test the functionality of DNS operation on a domain controller, as well as troubleshoot issues with DNS forwarders, delegation, dynamic updates, and record registration?
  - a. Using DNS Manager
  - b. Using dcdiag /test:dns
  - c. Using dnscmd.exe
  - d. Using nslookup
14. What type of DNS record is used to contain an alias for another record, allowing for the use of different names for the same host?
  - a. A record
  - b. AAAA record
  - c. CNAME record
  - d. PTR record

15. When troubleshooting a device or service that has failed to start, what utility may have information regarding the cause?
  - a. Microsoft Management Console
  - b. Event Viewer
  - c. Performance Monitor
  - d. Resource Monitor
16. An administrator can run a PowerShell command on a remote server using what additional element?
  - a. -RemotePC
  - b. -ComputerName
  - c. -RemoteComputer
  - d. -TargetPC
17. Packets are delivered to a single node on a network when using what type of IPv6 address?
  - a. Anycast address
  - b. Default gateway address
  - c. Multicast address
  - d. Unicast address
18. To find a full list of policies and preferences that can have background processing disabled, where should you look?
  - a. Computer Configuration\Policies\Administrative Templates\Group Policy
  - b. Computer Configuration\Policies\Administrative Templates\System\Group Policy
  - c. User Configuration\Policies\Administrative Templates\Group Policy
  - d. User Configuration\Policies\Administrative Templates\System\Group Policy
19. How can an administrator remove all audit policy subcategories so that auditing is controlled only by Group Policy?
  - a. auditpol /remove
  - b. auditpol /delete
  - c. auditpol /clean
  - d. auditpol /clear
20. Which of the following scenarios is *not* ideal for the deployment of a single domain structure?
  - a. The domain structure must be simple
  - b. The domain structure must be low cost
  - c. The domain structure must provide easy management capabilities
  - d. The domain structure must be able to utilize different name identities
21. A valid digital certificate that is *not* self-signed is issued by:
  - a. A VPN server
  - b. A DirectAccess client
  - c. A Certification Authority
  - d. A router
22. You have an internetwork of four LANs connected via routers. You want to configure BranchCache to support all four LANs. What should you configure?
  - a. NFS sharing mode
  - b. Distributed cache mode
  - c. File store mode
  - d. Hosted cache mode

23. Two users, Marco and Alice are engaging in secure communication using only asymmetrical encryption. Marco needs to send a secure message to Alice. What occurs first?
- Alice sends a shared secret to Marco
  - Alice sends Marco Alice's public key
  - Marco sends Alice Marco's private key
  - Marco sends a secret key to Alice
24. What does the /target option do when used with the gpupdate command?
- The option can be used to specify a remote computer to force policy updates
  - The option can specify whether computer or user policy settings should be updated
  - The option allows the administrator to target a specific policy setting to be updated
  - The option allows the specification of a target time window for the update
25. To enable PowerShell remote management, what command must be run?
- Enable-PSremoting -force
  - Set-Remotemanage -enable
  - Set-Property remote-management -o on
  - Enable-PSRemoting -allow
26. What command can be used to flush the local DNS cache on a Windows computer?
- nslookup -f
  - ipconfig /flushdns
  - dns dump
  - service dnscache restart
27. Your company deals with highly confidential information, some of which is transmitted via email among employees. Some documents have been forwarded via email, making the documents more difficult to track. You want to be able to prevent employees from forwarding certain emails. What should you deploy?
- EFS
  - Web SSO
  - AD RMS
  - AD CS
28. If a game or desktop publishing app that relies heavily on graphics is not performing well or giving errors, what command can you run to view DirectX information?
- Dxshoot.exe
  - Gpuddiag.exe
  - Dxdiag.exe
  - Video.exe
29. If a DirectAccess user has issues with their laptop or remote device, what can be enabled to facilitate help desk personnel obtaining remote desktop access to the client?
- Teredo
  - ISATAP
  - 6to4
  - IPSec

30. Which AD DS design should you use if you want your design to support business-to-business relationships where the account federation server validates credentials and no Active Directory trust is created?
- Web SSO
  - Federated Web SSO with forest trust
  - AD RMS Federated trust
  - Federated Web SSO
31. As an administrator, you need to stop and restart the print spooler service on a Server Core installation. What PowerShell cmdlet should you use?
- Stop-PrinterSpooler
  - Halt-Spooling
  - Stop-Service Spooler
  - Halt-Service Spooler
32. Which of the following *usually* includes the user's logon name, group memberships, and other user attributes in an AD FS-enabled network?
- Resource
  - Trust
  - Claim
  - Classification
33. If an employee leaves a company, what should happen to any certificates held by that employee that were issued by the company's PKI?
- They should be forwarded to the AIA
  - They should be put on the CRL
  - They should be included in the CDP
  - They should be added to the OR
34. You recently made changes to the registry that you thought would fix a problem. However, when you next tried to boot the system, the boot was unsuccessful. What boot option should you try?
- Debugging Mode
  - Disable automatic restart on system failure
  - Registry Repair Mode
  - Last Known Good Configuration
35. Which of the following commands should you use if you want to see a list of shadow copies on the current system?
- Vssadmin
  - Diskpart
  - Scopy
  - Wbadmin
36. What should you do if you want a junior administrator to be able to back up files and directories, restore files and directories, and shut down the system without giving the user broad administrative access to the domain?
- Assign the user the "Back up files and directories" right.
  - Add the user to the Power Users group.
  - Add the user to the Enterprise Admins group.
  - Add the user to the Server Operators group.

37. You're configuring a failover cluster and want a quorum configuration in which cluster quorum data is located in a shared folder on a server in another location. Which quorum configuration should you choose?
- Node Majority
  - Node and Disk Majority
  - Node and File Share Majority
  - No Majority: Disk Only
38. What does a failover cluster node use to determine if another node is communicating?
- Drainstop
  - Witness
  - Quorum
  - Heartbeat
39. What is the *first* domain installed in a forest called?
- Master domain
  - Primary tree
  - Forest root
  - Global catalog
40. Your company has purchased another company that also uses Windows Server 2012 and Active Directory. Both companies need to be able to access each other's forest resources. How can you achieve this goal with the least administrative effort?
- Share the global catalog for both companies
  - Create a two-way forest trust
  - Configure an external trust
  - Configure selective authentication
41. What can you do if you notice that a DC failed to register its service records?
- Configure entries in the hosts file.
  - Restart the DNS server using Restart-Service DNS –SRV
  - Stop and start the Netlogon service.
  - Manually add A records to the DNS server.
42. You have four sites: San Francisco, Phoenix, Houston, and Pittsburgh. You have created site links between San Francisco and Phoenix and between Phoenix and Houston, and between Houston and Pittsburgh with the default site link settings. What do you need to do to make sure replication occurs between San Francisco and Pittsburgh?
- Configure a Bridgehead Server between San Francisco and Pittsburgh.
  - Create a site link bridge between San Francisco and Pittsburgh.
  - Create a new connection object between San Francisco and Pittsburgh.
  - Do nothing; replication will occur between all sites with the current configuration.
43. What is the name for a domain controller on which changes can't be written?
- Read-only domain controller
  - Access-only domain controller
  - No write domain controller
  - Secured domain controller

44. You have received a call indicating that some users are having difficulty logging on after a password change. Which FSMO role should be investigated?
- Schema master
  - PDC emulator
  - RID master
  - Infrastructure master
45. Within the NTDS folder, which file stores the main Active Directory database?
- Edb.log
  - Edb.chk
  - Ntds.dit
  - Edbres00001.jrs
46. With universal group membership caching, how often is the cached information on group membership refreshed?
- Every 2 hours
  - Every 8 hours
  - Every 2 days
  - Every 8 days
47. What file holds the preferences and settings of the currently signed-in user?
- Ntprofile.dat
  - Ntuser.dat
  - Profile.ini
  - Userconfig.ini
48. Which of the following tasks *cannot* be performed using Task Manager?
- End a process
  - End a process tree
  - Restart a process
  - Start a process
49. Remote computers attempting to connect to the local computer are examples of what type of connection?
- Inbound connections
  - Outbound connections
  - Concurrent connections
  - Firewalled connections
50. Which policy below requires synchronous processing to ensure a consistent computing environment?
- Wireless network policies
  - Wired network policies
  - Script policies
  - Software installation policies
