

Contestant Number: _____

Time: _____

Rank: _____

SERVER ADMINISTRATION USING MICROSOFT (310)

STATE – 2020

TOTAL POINTS

_____ (500 points)

Failure to adhere to any of the following rules will result in disqualification:

- 1. Contestant must hand in this test booklet and all printouts. Failure to do so will result in disqualification.**
- 2. No equipment, supplies, or materials other than those specified for this event are allowed in the testing area. No previous BPA tests and/or sample tests or facsimile (handwritten, photocopied, or keyed) are allowed in the testing area.**
- 3. Electronic devices will be monitored according to ACT standards.**

TEST TIME: 60 Minutes

Property of Business Professionals of America.
May be reproduced only for use in the Business Professionals of America
Workplace Skills Assessment Program competition.

**Identify the letter of the choice that best completes the statement or answers the question.
Mark A if the statement is True. Mark B if the statement is False.**

1. What record type identifies the name server that's authoritative for the domain, and includes a variety of timers, dynamic update configuration and zone transfer information?
 - a. NS
 - b. PTR
 - c. SRV
 - d. SOA
2. What type of attack is the account lockout feature specifically designed to prevent?
 - a. Man-in-the-middle attack
 - b. Brute force attack
 - c. Smurf attack
 - d. Phishing attack
3. What happens to the NTFS permissions applied to a folder when the folder is moved to a different folder in the same volume?
 - a. It loses its permissions entirely and inherits the permissions from the new parent folder.
 - b. It keeps its permissions, but inherits the permissions from the new parent folder.
 - c. It keeps the previous permissions in the new folder
 - d. The user is prompted to keep the original permissions or inherit the permissions of the new folder.
4. Your Windows Server 2016 installation is crashing and failing to create a crash dump file. What is most likely the cause for the failure of the creation of the dump file?
 - a. The drive controller driver is an unsigned and unsupported driver.
 - b. The paging file is disabled.
 - c. The server dump file has incorrect permissions.
 - d. The server paging file has been placed in a RAID array.
5. You need to allow your network technician to view the RMS logs and reports, but no additional permissions should be given to the technician. Which of the following would give you the correct results?
 - a. Add the technician to the Backup Operators group
 - b. Add the technician to the Domain Admins group
 - c. Delegate the AD RMS Services role
 - d. Delegate the AD RMS Auditor role

6. You have shared a printer. Which of the following explains the permissions applied to the share by default?
 - a. The everyone group has print permissions.
 - b. The Creator Owner is limited to print permissions.
 - c. The Administrator account has only the Manage this printer and Manage documents permissions.
 - d. The Remote Interactive Logon group has Manage this printer permissions.
7. What does the “Print spooled documents first” option do?
 - a. It enables jobs that have completed spooling to be printed, but only when using printer pools.
 - b. It ensures that printed pages do not intermix between different jobs.
 - c. It enables jobs that have completed spooling to be printed, after accounting for the job priority.
 - d. It enables jobs that have completed spooling to be printed, no matter what the priority.
8. There are four different password-based methods of authentication. You want to use the one most preferred for security. Which of the following is the preferred authentication for Windows Server 2016?
 - a. PAP
 - b. CHAP
 - c. MS-CHAP
 - d. MS-CHAPv2
9. When setting up Kerberos, you have checked the “Enforce user logon restrictions” option. What does this do?
 - a. It enforces the account password configuration options in Group Policy during the login phase.
 - b. It turns on Kerberos security.
 - c. It forces the application of user configuration options defined by Group Policy.
 - d. It forces a user to be subject to logon restrictions defined in the user’s properties in Active Directory Users and Computers.
10. You need to delete cached DNS information on a workstation. What ipconfig command option could be used to perform this task?
 - a. /cleardns
 - b. /releasedns
 - c. /registerdns
 - d. /flushdns

11. Disk mirroring is the same as what type of disk redundancy?
 - a. Disk high-level striping
 - b. Disk duplexing
 - c. Disk leveling
 - d. Disk striping with parity
12. In a ping response packet, what does the TTL field indicate?
 - a. Total time lost, which indicates the amount of time lost in the transit of the packet.
 - b. Time to live, which indicates how many hops the packet can go through before the packet is expired and discarded.
 - c. Time to lease, indicates how long the IP address will be used by the target computer.
 - d. Time to locate, indicates how much time was spent looking for the IP address on the network
13. You need to restore the DHCP database from backup. Where on the computer are the backups stored by default?
 - a. %systemroot%\System32\dhcp\dhcpbackup.txt
 - b. %systemroot%\System32\dhcp\dhcp.mdb
 - c. %systemroot%\System32\dhcp\backup\dhcpcfg
 - d. %systemroot%\System32\dhcp\backup\dhcp.bak
14. You have a non-PostScript laser printer. Which of the following is most common for the page description language?
 - a. Printer Control Language (PCL)
 - b. Print Format File (PFF)
 - c. Enhanced Print Language (EPL)
 - d. Defined Print Control (DPC)
15. In Group Policy Computer Configuration node, which folder contains policies that can affect general computer system settings, such as disk quotas?
 - a. Control Panel
 - b. Network
 - c. Server
 - d. System
16. Spooling a print job helps to free up ____ on the print server.
 - a. Hard drive utilization
 - b. Memory utilization
 - c. Paged memory utilization
 - d. CPU utilization

17. You are implementing a VPN server to allow clients to connect from mobile networks and networks that have restrictive firewalls. Which of the following VPN tunneling protocol would be best for this task?
- a. Point-to-point protocol
 - b. Layer 2 tunneling protocol
 - c. OpenVPN
 - d. Secure Socket Tunneling Protocol
18. You have created a DHCP scope with address range 192.168.1.1 to 192.168.1.254. You have seven file servers configured with static addresses in the range 192.168.1.1 to 192.168.1.7. You plan to configure another ten servers to use static addresses keeping them in the same address area, 192.168.1.8 to 192.168.1.17. What should you configure on your scope?
- a. New prefix length
 - b. Different lease duration
 - c. Reservations
 - d. Exclusion range
19. Your boss has asked you to create a caching-only DNS server. What is it?
- a. It is a DNS server with no zones.
 - b. It is a DNS server with a stub zone.
 - c. It is a DNS server with a reverse zone only.
 - d. It is a DNS server with a forward zone only.
20. How is a Canonical Name (CNAME) record used?
- a. It contains the address of an e-mail server responsible for the domain.
 - b. It is used for reverse DNS lookups.
 - c. It identifies the name server that is authoritative for the domain.
 - d. It functions as an alias for another record that allows you to refer to the same resource with a different name.
21. When a computer using DHCP initiates the IP address request sequence, what is the type of packet sent?
- a. DHCPREQUEST
 - b. DHCPDISCOVER
 - c. DHCPOFFER
 - d. DHCPNAK

22. To save space on the server, your boss asks you to use compressed files and folders. What is the primary disadvantage of performing this task should you tell him?
- a. There would be an increase disk space usage
 - b. There would be an increase in RAM utilization
 - c. There would be an increase in CPU utilization
 - d. There would be an increase in backup times
23. Which statement is true regarding the use of print job priorities?
- a. A print job with a priority of 1 is considered a high priority
 - b. A print job with a priority of 99 is considered a high priority
 - c. Print jobs are assigned a priority of 99 by default
 - d. Print jobs are assigned a priority of 50 by default
24. You have been assigned with implementing a server infrastructure that allows clients to use virtual machine and session-based desktops to access and run applications on servers. What role should you install for this task?
- a. Volume Activation Services
 - b. Remote Desktop Services
 - c. Remote Access Services
 - d. Network Controller Services
25. What is the first domain installed in a forest called?
- a. Master domain
 - b. Primary tree
 - c. Forest root
 - d. Global domain
26. You need to access system recovery and restore tools as well as diagnostics. What option from the Advanced Boot Options menu allows you to do this?
- a. System Restore
 - b. Safe Mode
 - c. Recovery Mode
 - d. Repair Your Computer
27. Which Group Policy option can be used to force users off who are still logged on after hours, using logon hour controls?
- a. Network security: Enforce logon hours
 - b. Network security: Force logoff when logon hours expire
 - c. Account policy: Disallow user sessions when logon hours expire
 - d. Account policy: Log off users when logon hours expire

28. Which of the following is NOT a category that is monitored by the Resource Monitor?
- a. CPU
 - b. Memory
 - c. Disk
 - d. Firewall
29. What term is used to describe a single printer that represents two or more print devices?
- a. Printer pool
 - b. Priority pool
 - c. Print management aliasing
 - d. Printer clustering
30. What character should you place at the end of a share name in order to hide the share?
- a. !
 - b. \$
 - c. ?
 - d. *
31. What is the primary container object for organizing and managing resources in a domain?
- a. Groups
 - b. Computer accounts
 - c. OUs
 - d. Security principals
32. Which of the following is a true statement regarding the conversion of group scope:
- a. Universal groups that are members of other universal groups can be converted to domain local groups
 - b. Universal groups can be members of global groups
 - c. Domain local groups can be converted to universal, as long as the domain local group does not contain other domain local groups
 - d. Global groups can't be converted to universal groups
33. You are administrator for an Active Directory domain and have been tasked with improving response time for resolving DNS queries for resources in a second company owned domain that does not use Active Directory. What type of zone can be used to accomplish this task with minimal overhead?
- a. A forward zone
 - b. A reverse zone
 - c. A stub zone
 - d. A glue zone

34. What logs should you check to possibly find out why active Directory replication is failing?
- DFS Replication log
 - Active Directory Replication log
 - Directory Service log
 - SYSVOL Transfer log
35. Which of the following is a negative consequence of using differential backups?
- You need additional space on the backup target
 - Write performance on the source volume is decreased
 - It takes longer to perform the backup
 - It takes longer to perform the restore
36. You need to refresh the group policy remotely on a Windows Vista client. Which command would perform this task?
- Invoke-GPUUpdate
 - Gpupdate.exe
 - Remote-GPUUpdate
 - Gpremove.exe
37. Using PowerShell, what cmdlet can be used to set permissions for a security principal to a GPO or to all GPOs?
- Chmod-GPO
 - Change-GPOSecurity
 - Set-GPPermission
 - Set-GPOSecurity
38. An employee at your company has called you because they attempted to log in to their computer several times with a new password created after a password expiry notice, but the attempts made were unsuccessful. You have reset the user's account password, but the user is still unable to login. What is the most likely cause?
- The user is in a new OU and lacks log on permissions to the computer used
 - The user's account has been locked due to frequent failed password attempts
 - The computer is having issues communicating with the domain and is attempting to use cached credentials
 - The global catalog server has not replicated the user's account information to the rest of the domain

39. In what order are Group Policy Objects applied?
- Site-linked GPOs, local policies, domain-linked GPOs, OU-linked GPOs
 - Domain-linked GPOs, OU-linked GPOs, local policies, site-linked GPOs
 - Site-linked GPOs, domain-linked GPOs, OU-linked GPOs, local policies
 - Local policies, site-linked GPOs, domain-linked GPOs, OU-linked GPOs
40. Which of the following is the built-in group that facilitates anonymous access to web resources by Internet Information Services (IIS)?
- IIS_ANON
 - Users
 - IIS_USERS
 - Anonymous logon
41. What RAID level offers no redundancy features and is targeted towards performance?
- RAID 0
 - RAID 1
 - RAID 5
 - RAID 10
42. What password security option ensures that a user must choose a new password when a password change is required?
- Maximum password age
 - Minimum password age
 - Passwords must meet complexity requirements
 - Enforce password history
43. Why should event auditing policies be used sparingly?
- Event auditing can provide an attacker with valuable information regarding the structure of a network's security policies.
 - Event auditing can fill the Security event log and consume considerable resources.
 - Event auditing can trigger access warning messages for users.
 - Event auditing can affect the access control list security for protected objects.
44. If a DHCP server does not respond to a client's first renewal request, how long will the client keep its current address until initiating the lease renewal request?
- 87.5% of lease interval
 - 80% of lease interval
 - 75.5% of lease interval
 - 70% of lease interval

45. Which statement regarding the Windows Server Backup tool is NOT true?
- a. The Windows Server Backup tool only backs up to NTFS and not FAT volumes
 - b. The Windows Server Backup tool can't restore backups made from pre-Windows Server 2008 that use ntbackup.exe
 - c. The Windows Server Backup tool can't perform a backup to an external drive
 - d. The Windows Server Backup tool can't perform a backup to a tape.
46. You need to use the System File Check utility to restore a corrupted Windows file. Where does the System File Check get the uncorrupted version from?
- a. The: C:\Windows\System32 folder
 - b. The C:\Windows Drivers folder
 - c. The C:\Windows\hidden\sysfiles folder
 - d. The C:\Windows\System\backup folder
47. When creating a DNS reverse lookup zone for the network 192.168.12.0/24, which of the following would be the correct result?
- a. 192.168.12.arpa
 - b. 192.168.12.in-addr.arpa
 - c. 12.168.192.arpa
 - d. 12.168.192.in-addr.arpa
48. You need to restore the registry settings from the previous login on a Windows 7 computer. What startup option can be used to do this task?
- a. Last Known Good Configuration
 - b. System Restore
 - c. Debugging Mode
 - d. Safe Recovery
49. In DHCP, an IP reservation is made by creating an association between an IP address and what type of client identifier?
- a. NIC GUID
 - b. MAC address
 - c. User Class
 - d. Vendor Class
50. What type of DNS record is needed to indicate a mail server for the given domain?
- a. A
 - b. AAAA
 - c. MX
 - d. SOA
