Time: _____

Rank: _____

SERVER ADMINISTRATION USING MICROSOFT (310)

STATE 2022

CONCEPT KNOWLEDGE:

Multiple Choice (50 @ 2 points each) _____ (100 points)

TOTAL POINTS _____ (100 points)

Test Time: 60 minutes

GENERAL GUIDELINES:

Failure to adhere to any of the following rules will result in disqualification:

1. Member must hand in this test booklet and all printouts if any.
2. No equipment, supplies, or materials other than those specified for this event are allowed in the testing area. No previous BPA tests and/or sample tests (handwritten, photocopied, or keyed) are allowed in the testing area.
3. Electronic devices will be monitored according to ACT standards.

MULTIPLE CHOICE

Identify the letter of the choice that *best* completes the statement or answers the question.

1. What record type do servers identify to map IP address to domain name?
 - a. TXT
 - b. PTR
 - c. SOA
 - d. SRV
2. Which of the following is *not* part of Microsoft Password Complexity requirements?
 - a. Uppercase Characters
 - b. Digits 0 through 9
 - c. Special characters
 - d. None of these are correct
3. Which of the following is true when both NTFS and share permissions are applied to a shared folder?
 - a. Only NTFS permissions will be applied
 - b. Only share permissions will be applied
 - c. Both sets of permissions will be applied
 - d. Neither set of permissions are applied
4. Your Windows Server 2016 installation is crashing and creates a crash dump file. What is most likely location to find the file?
 - a. %systemroot%\memory.dmp
 - b. %systemroot%\Windows\memory.dmp
 - c. %systemroot%\Logs\memory.dmp
 - d. %systemroot%\System32\memory.dmp
5. You need to allow your technician to manage virtual machines without making them a member of Administrators. Which of the following would give you the correct results?
 - a. Add the technician to the Hyper-V Administrators Group
 - b. Add the technician to the Domain Admins group
 - c. Delegate the Hyper-V Services role
 - d. Delegate the Virtual Machine Auditor role
6. You have shared a printer. Which of the following would restrict access?
 - a. Set Administrator only to Manage this printer and Manage documents permissions.
 - b. Remove the Everyone group from print permissions.
 - c. Set Creator Owner is limited from print permissions.
 - d. Disable manage this printer permissions for the Remote Interactive Logon group.

7. What does the “Start printing immediately” option do?
 - a. It enables jobs that have completed spooling to be printed.
 - b. It ensures that printed pages do not intermix between different jobs.
 - c. Allows jobs to begin printing before spooling is completed.
 - d. It enables jobs that have completed spooling to be printed, no matter what the priority.
8. You are connecting to a Windows Server 2016 VPN, and authenticating using TTLS and non-EAP communication. What is the most secure protocol for password authentication?
 - a. EAP-MSCHAPv2
 - b. CHAP
 - c. MS-CHAP
 - d. MS-CHAPv2
9. When setting up Kerberos, you have checked the “Enforce user logon restrictions” option. What does this do?
 - a. It enforces maximum number of time (in hours) a Kerberos user ticket remains active.
 - b. It enforces the maximum number of incorrect password attempts before account lockout.
 - c. It forces Kerberos to generate a new ticket granting ticket.
 - d. It forces a user to be subject to logon restrictions defined in the user’s properties in Active Directory Users and Computers.
10. Which ipconfig command option could be used to update client information to the DNS server?
 - a. /cleardns
 - b. /releasedns
 - c. /registerdns
 - d. /flushdns
11. Disk mirroring is used in which redundant array?
 - a. RAID 1
 - b. RAID 5
 - c. RAID 0
 - d. RAID 6
12. What protocol is used to send and receive PING packets?
 - a. STP
 - b. HTTP
 - c. RIP
 - d. ICMP

13. On Windows Server 2016 using a standard installation of DHCP where is the default backup location for the DHCP database?
- %systemroot%\System32\dhcp\backup\dhcp.mdb
 - %systemroot%\System32\dhcp\dhcpbackup.txt
 - %systemroot%\System32\dhcp\backup\dhcpcfg
 - %systemroot%\System32\dhcp\dhcp.cfg
14. What is the most common non-PostScript printer language?
- Printer Control Language (PCL)
 - Print Format File (PFF)
 - Enhanced Print Language (EPL)
 - Defined Print Control (DPC)
15. What editing a GPO what folder under Group Policy Computer Configuration contains general system settings, such as disk quotas?
- Administrative Templates
 - Windows Settings
 - Preferences
 - Software Settings
16. What is the primary benefit of the print spooling feature on a dedicated print server?
- Faster print times
 - Multiple users can submit print jobs simultaneously
 - More efficient paged memory utilization
 - Less CPU utilization
17. What VPN tunneling protocol should be implemented when connecting via a mobile network or from behind a restrictive firewall?
- Point-to-point protocol
 - Layer 2 tunneling protocol
 - Secure Socket Tunneling Protocol
 - OpenVPN
18. When planning a new DHCP scope with an address range 10.1.1.1 to 10.1.1.254 and allowing for existing file servers in the 10.1.1.1 to 10.1.1.17 range. What DHCP scope configuration should be implemented?
- New prefix length
 - Different lease duration
 - Reservations
 - Exclusion range
19. What is a caching-only DNS server?
- It is a DNS server with no zones.
 - It is a DNS server with a stub zone.
 - It is a DNS server with a reverse zone only.
 - It is a DNS server with a forward zone only.

20. What is the primary function of a Canonical Name (CNAME) DNS record?
- It contains the address of an e-mail server responsible for the domain.
 - It is used for reverse DNS lookups.
 - It identifies the name server that is authoritative for the domain.
 - It is an alias for an A record with a different name.
21. When a device requests an IP address on a DHCP managed network, what type of packet is sent first?
- DHCPREQUEST
 - DHCPDISCOVER
 - DHCPOFFER
 - DHCPNAK
22. The previous administrator enabled compressed files and folders to save space. You have been asked to explain what is the primary disadvantage of this configuration?
- There would be an increase disk space usage
 - There would be an increase in RAM utilization
 - There would be an increase in CPU utilization
 - There would be an increase in backup times
23. Which of the following can be used to connect to a remote server and issue commands?
- Enter-PSSession
 - Invoke-RemoteConnection
 - NETSH Start Remote Target
 - New-RemoteConnection
24. You want to implement a new server role that allows users to access a virtual machine to run their business applications remotely. What role is the best choice for this task?
- Volume Activation Services
 - Remote Desktop Services
 - Remote Access Services
 - Network Controller Services
25. When installing a new Active Directory Forest where is the first domain object created?
- Master Domain
 - Primary Tree
 - Forest Root
 - Global Domain
26. Which boot option allows you to access advanced system recovery and restoration tools?
- Active Directory Restore Mode
 - Safe Mode with Networking
 - Advanced Recovery Mode
 - Repair Your Computer

27. Which Group Policy option limits active hours a user may be logged in?
- Account policy: Disallow user sessions when logon hours expire.
 - Account policy: Log off users when logon hours expire.
 - Network security: Enforce logon hours.
 - Network security: Force logoff when logon hours expire.
28. Which of the following Resource manager tabs will display threads for active processes?
- Network
 - CPU
 - Memory
 - Disk
29. Which of the following is commonly used to manage a Windows Server 2016 Core installation using a GUI interface?
- RSAT
 - PowerShell
 - PuTTY
 - VMMSC
30. What special character can be placed at the end of a share name to hide it from the network browser?
- !
 - \$
 - ?
 - *
31. What Active Directory containers are used for organizing and managing objects in a domain?
- Organizational units
 - Universal groups
 - Computer accounts
 - Security principals
32. Which of the following statements regarding the conversion of group scope is true?
- Universal groups that are members of other universal groups can be converted to domain local groups.
 - Security groups can be converted to global groups.
 - Empty domain local groups can be converted to universal groups.
 - Global groups can't be converted to universal groups.
33. You are an administrator in a multi-domain environment and have been asked to improve response times for resolving DNS queries for a non-Active Directory domain from your Active Directory Domain. What type of DNS zone can be used decrease query times with minimal overhead?
- A forward zone
 - A reverse zone
 - A stub zone
 - A glue zone

34. When Active Directory replication is failing what log is most useful to determine the root cause of the failure?
- DFS Replication log
 - Active Directory Replication log
 - SYSVOL Transfer log
 - Directory Service log
35. When using differential backups what is a potential negative impact of this configuration?
- You need additional space on the backup target.
 - Write performance on the source volume is decreased.
 - It takes longer to perform the backup.
 - It takes longer to perform the restore.
36. What command can be used to refresh the group policy remotely on a Windows 10 client?
- Invoke-GPUdate
 - Gpupdate.exe
 - Remote-GPUdate
 - Gpremove.exe
37. What PowerShell cmdlet is used to set permissions on one or many Group Policy Objects?
- Chmod-GPO
 - Change-GPOSecurity
 - Set-GPPermission
 - Set-GPOSecurity
38. A network user calls into the helpdesk after trying to login to their workstation several times to have their password reset. You reset the user's account password, and the user is still unable to login. What is the most likely reason?
- The user is in a new OU and lacks log on permissions to the computer used.
 - The user's account has been locked due to frequent failed password attempts.
 - The computer is having issues communicating with the domain and is attempting to use cached credentials.
 - The global catalog server has not replicated the user's account information to the rest of the domain.
39. When multiple Group Policies Objects are applied what order determines the resultant set of policy?
- Site-linked GPOs, local policies, domain-linked GPOs, OU-linked GPOs
 - Domain-linked GPOs, OU-linked GPOs, local policies, site-linked GPOs
 - Site-linked GPOs, domain-linked GPOs, OU-linked GPOs, local policies
 - Local policies, site-linked GPOs, domain-linked GPOs, OU-linked GPOs

40. Which of the following Internet Information Services (IIS) built-in groups allows anonymous access to web resources?
- a. Nobody
 - b. IIS_USERS
 - c. Anonymous logon
 - d. IIS_ANON
41. What performance forward RAID level features no redundancy with disk striping?
- a. RAID 0
 - b. RAID 1
 - c. RAID 5
 - d. RAID 10
42. What Group Policy Object determines the number of unique new passwords associated with a user account before an old password can be reused?
- a. Maximum password age
 - b. Minimum password age
 - c. Passwords must meet complexity requirements
 - d. Enforce password history
43. What is a possible downside of using full event auditing policies?
- a. Event auditing can provide an attacker with valuable information regarding the structure of a network's security policies.
 - b. Event auditing can fill the Security event log and consume considerable resources.
 - c. Event auditing can trigger access warning messages for users.
 - d. Event auditing can affect the access control list security for protected objects.
44. How much time will expire on a DHCP client's lease before it sends a lease renewal request to the DHCP server it obtained it from?
- a. 50% of lease interval
 - b. 55.5% of lease interval
 - c. 80% of lease interval
 - d. 87.5% of lease interval
45. Which statement regarding the Windows Server Backup tool is true?
- a. The Windows Server Backup tool can only use NTFS volumes.
 - b. The Windows Server Backup tool cannot restore backups made using ntbackup.exe.
 - c. The Windows Server Backup tool can perform a backup to an external drive.
 - d. All of these are correct.
46. You need to use the System File Check utility to restore a corrupted Windows file. Where does the System File Check get the uncorrupted version from?
- a. The: C:\Windows\System32 folder
 - b. The C:\Windows Drivers folder
 - c. The C:\Windows\hidden\sysfiles folder
 - d. The C:\Windows\System\backup folder

47. Which of the following is the correct format of DNS reverse lookup zone for the network 10.50.12.0/24?
- a. 10.50.12.arpa
 - b. 10.50.12.in-addr.arpa
 - c. 12.50.10.in-addr.arpa
 - d. 12.50.10.arpa
48. Which of the following advanced boot options will allow you to load registry settings from the previous login on a Windows 10 client?
- a. Last Known Good Configuration
 - b. System Restore
 - c. Debugging Mode
 - d. Safe Mode with command prompt
49. An IP reservation is an association between an IP address and what type of client identifier in DHCP?
- a. NIC GUID
 - b. MAC address
 - c. User Class
 - d. Vendor Class
50. What is the difference in DNS records of the A and AAAA type?
- a. A is used for IPv4 addresses while AAAA is used for IPv6.
 - b. AAAA records are used for servers with a higher priority.
 - c. A records are no longer used.
 - d. AAAA records are used to refer to resources in another domain.
