## MULTIPLE CHOICE

Identify the choice that *best* completes the statement or answers the question.

1. Coupling allows \_\_\_\_\_.
  - a. data to be passed from one module to all other modules.
  - b. data to be passed from one module to another module.
  - c. data to be unavailable to other modules.
  - d. instructions to be available to other modules.
2. Which of the following is an example of a language that is based on the functional paradigm?
  - a. LISP
  - b. PROLOG
  - c. C
  - d. C++
3. Which of the following is the process to try to induce someone to provide you with personal information?
  - a. Cyberstalking
  - b. Looping
  - c. Phishing
  - d. Licensing
4. Which of the following is a network of the national standards institutes of more than 159 countries?
  - a. ISO
  - b. NIST
  - c. FIPS
  - d. IEC
5. To locate additional information about a Linux command or configuration file, you can use the \_\_\_\_\_ page.
  - a. man
  - b. auto
  - c. config
  - d. info
6. Which of the following statements about IPsec is true?
  - a. IPsec performs authentication but does not encrypt packets.
  - b. IPsec performs encryption but does not support authentication.
  - c. IPsec supports both encryption and authentication.
  - d. IPsec does not support either encryption or authentication.

7. Of the following files which one stores the primary account data for local users of a Linux system?
  - a. /etc/shadow
  - b. /etc/gshadow
  - c. /etc/passwd
  - d. /etc/group
8. The data dictionary is a \_\_\_\_\_.
  - a. list of definitions of words used in the development of the solution
  - b. list of definitions and attributes of the variables used in the solution
  - c. table the computer uses internally to define the memory location of the variables
  - d. table of values to test the solution of the problem
9. There is limited support for multiprogramming in the processor itself, and \_\_\_\_\_ is required for multiple applications to share the processor and other resources at the same time.
  - a. memory
  - b. data
  - c. software
  - d. hardware
10. The majority of machine languages are based on the \_\_\_\_\_ paradigm.
  - a. imperative
  - b. declarative
  - c. functional
  - d. object-oriented
11. Which of the following is one way to protect yourself against identity theft?
  - a. Do not provide personal information to anyone if it is not absolutely necessary.
  - b. Use Firefox as your web browser.
  - c. Use Windows as your operating system.
  - d. None of the above.
12. Which of the following key information security principles traces actions back to their source?
  - a. Accountability
  - b. Assurance
  - c. Authorization
  - d. Accounting
13. Which of the following are the two basic modes in which IPsec can operate?
  - a. Encrypted and encapsulated
  - b. Open and secure
  - c. Transport and tunnel
  - d. Authenticated and clear text

14. To see if there are any errors in the /etc/passwd file, execute the \_\_\_\_\_ command while logged in as the root user.
- a. pwck
  - b. grep
  - c. useradd
  - d. chfn
15. In this scenario, a process can be moved partially or completely from main memory to disk.
- a. Swapping
  - b. Relocating
  - c. Suspending
  - d. Blocking
16. In the formal and actual parameter listings the variable names \_\_\_\_\_.
- a. must be the same
  - b. maybe the same
  - c. cannot be the same
  - d. only the call-by-value names must be the same
17. The decision logic structure \_\_\_\_\_.
- a. processes instructions in order of listing
  - b. allows the computer to make a choice of two paths to follow
  - c. allows the computer to repeat instructions
  - d. allows the computer to make a choice of two or more paths to follow
18. What of the following does not require a Boolean condition?
- a. If- else statement
  - b. While statement
  - c. Assignment statement
  - d. For loop statement
19. Which of the following is not a control statement?
- a. If- else statement
  - b. While statement
  - c. Assignment statement
  - d. For statement
20. Experts describe which country as having the strictest cybercrime laws?
- a. United States
  - b. Russia
  - c. France
  - d. Romania

21. What is the need for a specific cybercrime law?
- a. To prevent defendants from finding loopholes
  - b. So it will be internationally recognized
  - c. So that multiple laws will not be necessary
  - d. None of the above
22. Which of the following is a behavioral control that can be used to safeguard against the loss of integrity?
- a. Rotation of duties
  - b. Log analysis
  - c. Code testing
  - d. Digital signatures
23. Which of the following refers to a computer used in a DDoS attack?
- a. Botnet
  - b. Victim
  - c. Bot
  - d. Handler
24. Which of the following IPsec component adds an attribute field to IP datagrams?
- Options:
- a. IP
  - b. AH
  - c. ESP
  - d. SA
25. VPNs use which of the following protocols to provide encrypted secure connection?
- a. SSL and TCP
  - b. IPsec and TCP
  - c. IPsec and SSL
  - d. SMTP and TCP
26. As a Linux administrator, you can modify user accounts using the \_\_\_\_\_ command.
- a. chfn
  - b. usermod
  - c. pwck
  - d. useradd
27. To remove a linux user and keep the user's home directory and mail spool, use the \_\_\_\_\_ command without any additional arguments.
- a. userdel
  - b. usermod
  - c. deluser
  - d. moduser

28. Processes in main memory and awaiting events are in the "\_\_\_\_\_" state.
- blocked
  - blocked/suspend
  - ready/ suspend
  - ready
29. In order to manage processes, the OS maintains \_\_\_\_\_ tables.
- process
  - I/O
  - memory
  - file
30. The values of local variables \_\_\_\_\_.
- are defined within a module.
  - are defined within the calling module.
  - can only be changed within the module.
  - are available to any called module.
31. Testing the solution \_\_\_\_\_.
- provides a validation of the solution
  - is not necessary
  - does not find logic errors
  - should only be done after the program on the computer is completed
32. The loop logic structure is as follows \_\_\_\_\_.
- processes instructions in order of listing.
  - allows the computer to make a choice of two paths to follow.
  - allows the computer to repeat instructions.
  - allows the computer to make a choice of two or more paths to follow.
33. Object-oriented programming does not involve which of the following?
- Inheritance
  - Resolution
  - Encapsulation
  - Polymorphism
34. Array positions are represented by numbers called \_\_\_\_\_.
- Indices
  - Parameters
  - Instance variables
  - Constants
35. The recommended Microsoft Edge privacy setting is \_\_\_\_\_.
- medium
  - medium high
  - very high
  - none of these are correct

36. One way to protect yourself from online harassment when using a chat room is to \_\_\_\_\_.  
a. not to use your real name  
b. not to use the chat room at night  
c. not to say too much in the chat room  
d. none of these are correct
37. Which of these could be considered a course of conduct directed at a specific person that causes substantial emotional distress in such a person and serves no legitimate purpose?  
a. Phishing  
b. Browsing  
c. Harassment  
d. None of the above
38. NIST is most accurately described by which of the following statements?  
a. A regulatory government organization that enforces standards  
b. A coalition of over 160 countries that creates standards  
c. A non-regulatory federal agency that develops and promotes standards  
d. A nongovernment organization that develops and promotes standards
39. Which of the following best describes the accountability key information security principle?  
a. The logging of access and usage of information resources  
b. The configuring of the Security log to record events  
c. The process of tracing actions to their source  
d. The process of identifying users who seek access to secure information
40. Authentication in information security can be achieved through which of the following methods?  
a. Intrusion detection systems  
b. Log files  
c. Auditing  
d. Tokens
41. As a security administrator, what is your primary responsibility?  
a. They create security policies.  
b. They design secure systems.  
c. They check if employees comply with security policies.  
d. They ensure appropriate separation of duties exists to prevent abuse of privilege.
42. The chief information security officer's responsibilities are best described by which of the following?  
a. Establish and maintain security and risk management programs for information resources.  
b. Direct policies and procedures designed to protect information resources.  
c. Provide technical facilities, data processing, and other support services to owners and users of information resources.  
d. Provide technical support for security of information resources.

43. To create a restricted shell account for guest users, the first step is to use the \_\_\_\_\_ option with the user add command and provide an argument of /bin/rbash.
- a. -d
  - b. -m
  - c. -g
  - d. -s
44. Which of the following commands can be used to provide some users with the ability to execute specific tasks as the administrator?
- a. usermod
  - b. sudo
  - c. apt-get
  - d. visudo
45. PAM, a powerful tool that allows an administrator to provide many restrictions to user accounts, stands for which of the following?
- a. Pluggable Account Modules
  - b. Private Authentication Modules
  - c. Pluggable Authentication Modules
  - d. Private Account Modules
46. This file contains the basic elements of a user's program and can be generated directly from a compiled object file.
- a. Register context
  - b. User-level context
  - c. System-level context
  - d. All of the above
47. The part of the operating system that chooses the next process to run is known as the \_\_\_\_\_.
- a. trace
  - b. process control block
  - c. dispatcher
  - d. PSW
48. The rectangle in a flowchart indicates a(n) \_\_\_\_\_.
- a. process
  - b. input or output instruction
  - c. decision
  - d. module to be processed
49. Indentation is used in the algorithm of loops to \_\_\_\_\_.
- a. indicate which instructions are to be repeated
  - b. indicate the beginning and end of the loop
  - c. indicate the entire loop
  - d. None of these are correct

50. Brackets are used in the algorithm of loops to indicate \_\_\_\_\_.  
a. which instructions are to be repeated  
b. the beginning and end of the loop  
c. the entire loop  
d. None of these are correct
