

Member ID: _____

Time: _____

Rank: _____

SERVER ADMINISTRATION USING MICROSOFT (310)

STATE 2023

Total Points (50 @ 2 points each) _____ **(100 points)**

Test Time: 60 minutes

GENERAL GUIDELINES:

Failure to adhere to any of the following rules will result in disqualification:

1. Member must hand in this test booklet and all printouts if any. Failure to do so will result in disqualification.
2. No equipment, supplies, or materials other than those specified for this event are allowed in the testing area. No previous BPA tests and/or sample tests (handwritten, photocopied, or keyed) are allowed in the testing area.
3. Electronic devices will be monitored according to ACT standards.

Directions: Identify the letter of the choice that *best* completes the statement or answers the question.

1. Which DNS record type is commonly found in a reverse lookup zone?
 - A. PTR
 - B. A
 - C. CNAME
 - D. SRV
2. Which statement is *not* true when the **Password must meet complexity requirements** security policy setting is enabled?
 - A. Passwords may not contain only numbers.
 - B. Users may change their own passwords multiple times in a 24-hour period.
 - C. Passwords may not contain the user's account name.
 - D. Passwords must include at least one non-alphanumeric (special) character.
3. When a user connects to a shared folder on a Windows server via its UNC path, which set of permissions determines the user's level of access?
 - A. Only the user's share permissions on the folder
 - B. The most restrictive of the user's share and NTFS permissions on the folder
 - C. The least restrictive of the user's share and NTFS permissions on the folder
 - D. Only the user's NTFS permissions on the folder
4. Your Windows Server 2022 virtual machine is crashing and generating a kernel dump file. Where is this file likely to be found?
 - A. %systemroot%\dumpfiles\memory.dmp
 - B. %programfiles%\kernel\memory.dmp
 - C. %systemroot%\Logs\Crash\memory.dmp
 - D. %systemroot%\memory.dmp
5. A user needs to be able to manage virtual machines on a particular Hyper-V host without being granted full administrative rights on the server. How can you accomplish this?
 - A. Add the user to the Remote Management Users group.
 - B. Add the user to the Server Operators group.
 - C. Use Local Security Policy on the server to grant the user the Administer Virtual Machines user right.
 - D. Add the user to the Hyper-V Administrators group.
6. You wish to allow only certain users to print their own documents on a shared printer in Windows Server 2022. Which of the following steps will *not* help to accomplish your goal?
 - A. Place the users into a group named PrinterUsers.
 - B. Grant the PrinterUsers group the Print permission on the shared printer.
 - C. Deny the Print permission for the Everyone group on the shared printer.
 - D. Remove the Print permission from the Everyone group on the shared printer.

7. What is the function of the “Start printing immediately” option?
 - A. It allows a document to begin printing before it has spooled completely.
 - B. It moves a queued document to the front of the print queue.
 - C. It instructs a printer to print a test page as soon as the current print job completes.
 - D. It grants a user the highest priority on a print server.
8. Where is the hosts file located on a Windows system?
 - A. %systemroot%\DNS\
 - B. %systemroot%\Logs\NetSetup\
 - C. %systemroot%\System32\drivers\etc\
 - D. %systemroot%\System32\Config\
9. You create a GPO containing custom Windows Update settings and link it to the domain. A week later, you discover that the workstations in the Marketing department are still using the default Windows Update settings. What is a likely cause of this?
 - A. A WMI filter is preventing the GPO from applying to the users in the Marketing department.
 - B. You were not logged in as a domain administrator when you created the GPO.
 - C. The workstations in the Marketing department have DHCP addresses.
 - D. The Marketing OU has the “Block inheritance” attribute enabled.
10. Which **ipconfig** command switch updates a Windows machine’s A and PTR records on a DNS server?
 - A. /flushdns
 - B. /registerdns
 - C. /forcedns
 - D. /updatedns
11. Which RAID level combines disk mirroring and striping?
 - A. RAID 5
 - B. RAID 1
 - C. RAID 10
 - D. RAID 6
12. You need to configure Windows Defender Firewall to allow ping packets from other devices to reach your machine. Which protocol should you allow through the firewall?
 - A. ICMP
 - B. UDP
 - C. IGMP
 - D. SMTP
13. You have been asked to restore the backup DHCP database on a Windows Server 2022 DHCP server. By default, where is this backup located?
 - A. %systemroot%\System32\dhcp\backup\
 - B. %systemroot%\dhcp\database\backup\
 - C. %systemroot%\System32\Config\dhcp\
 - D. %systemroot%\System32\database\dhcp\

14. Which of the following allows a DNS server to send queries for records in a particular domain to another DNS server?
- A. Reverse lookup zone
 - B. Root hints
 - C. Conditional forwarder
 - D. Forward lookup zone
15. In the Group Policy Editor, under which location can disk quotas be configured?
- A. Computer Configuration\Policies\Administrative Templates\System
 - B. Computer Configuration\Preferences\Windows Settings\Folders
 - C. User Configuration\Policies\Administrative Templates\System
 - D. Computer Configuration\Policies\Windows Settings
16. Which of the following is *not* a benefit of print spooling?
- A. Documents waiting in the print queue can be prioritized.
 - B. Multiple users can submit print jobs to the print server simultaneously.
 - C. Other tasks can be performed while spooled documents are printing.
 - D. Spooled documents use no memory on the print server.
17. Which VPN tunneling protocol can pass through any firewall that allows HTTPS traffic?
- A. Generic Routing Encapsulation (GRE)
 - B. Secure Socket Tunneling Protocol (SSTP)
 - C. Point-to-Point Tunneling Protocol (PPTP)
 - D. Layer 2 Tunneling Protocol (L2TP)
18. What should be configured in a DHCP scope to allow for a pre-existing device with a static IP address inside the DHCP address range?
- A. Reservation
 - B. Option 003
 - C. Lease duration
 - D. Exclusion
19. What is a caching-only DNS server?
- A. A DNS server with recursion disabled
 - B. A DNS server at the root of a namespace
 - C. A DNS server with no zones
 - D. A DNS server with no root hints configured
20. In DNS, a CNAME record maps a name to _____ .
- A. an IPv4 address
 - B. an email address
 - C. an authoritative server
 - D. another name

21. When a new device needs to obtain an IP address from a DHCP server, which type of packet does it send first?
- A. DHCP OFFER
 - B. DHCP ACK
 - C. DHCP REQUEST
 - D. DHCP DISCOVER
22. Enabling compressed files and folders can save disk space at the cost of what?
- A. Increased CPU usage
 - B. Decreased security
 - C. Increased memory usage
 - D. Longer backup times
23. Which PowerShell cmdlet allows you to issue commands to a remote machine?
- A. Enter-PSSession
 - B. Get-RemoteConnection
 - C. Start-Session
 - D. New-RemoteConnection
24. You wish to set up a Virtual Desktop Infrastructure (VDI) for your users. Which two Windows Server roles are needed for this?
- A. Remote Desktop Services and Active Directory Domain Services
 - B. Remote Access Services and Hyper-V
 - C. Remote Access Services and Remote Desktop Services
 - D. Hyper-V and Remote Desktop Services
25. What is the name of the first domain in an Active Directory forest?
- A. Primary domain
 - B. Resource domain
 - C. Forest root domain
 - D. Master domain
26. Which boot option should you choose if your system won't boot into Windows, and you need to access advanced system recovery and restoration tools?
- A. Safe Mode with Command Prompt
 - B. Repair Your Computer
 - C. Last Known Good Configuration (advanced)
 - D. Safe Mode with Networking
27. Which role service allows users to connect to remote sessions securely from outside the local network?
- A. Remote Desktop Connection Broker
 - B. Remote Desktop Gateway
 - C. Remote Desktop Virtualization Host
 - D. Remote Desktop Web Access

28. You need to determine how many threads are running in the context of each active process in Windows Server 2022 in real time. Which built-in tool is best suited to this?
- A. Task Manager
 - B. Process Monitor
 - C. Resource Monitor
 - D. Event Viewer
29. You need to remotely manage multiple instances of Windows Server 2022, including standalone servers, failover clusters, and one hyperconverged cluster. These servers are behind a firewall that allows HTTPS traffic to pass. There is currently no money in your department's budget to purchase management software. Which tool is likely to be your best option?
- A. Windows Admin Center
 - B. System Center 2022
 - C. Server Manager
 - D. Remote Server Administration Tools (RSAT)
30. You need to create a shared folder in Windows Server 2022 for use by your fellow administrators, but you don't want the folder to be visible to users browsing the local network. What should you name the share?
- A. Private!
 - B. Admin\$
 - C. Data*
 - D. System\$
31. Group Policy objects cannot be directly linked to which of the following?
- A. Organizational Units
 - B. Security groups
 - C. Domains
 - D. Sites
32. Which of the following statements is *not* true regarding Remote Desktop client access licenses (CALs)?
- A. In Per Device licensing mode, the number of CALs installed specifies the number of concurrent RDP connections that may occur.
 - B. Installed device CALs can be converted to user CALs and vice versa.
 - C. User CALs can only be used in an Active Directory domain.
 - D. Up to 20% of installed device CALs may be revoked.
33. You're configuring a DHCP reservation in Windows Server 2022 for a particular device on your network. What two pieces of information about the device do you need to know?
- A. Its DNS name and the IP address it will use
 - B. Its operating system version and DNS name
 - C. Its MAC address and DNS name
 - D. Its MAC address and the IP address it will use

34. You've been told that Active Directory replication isn't working between a pair of domain controllers. Which event log is most likely to give you useful information about the problem?
- A. Application
 - B. Directory Service
 - C. Active Directory Web Services
 - D. DFS Replication
35. ServerA and ServerB are identical in every way except their backup configuration. ServerA performs a full backup every Sunday night and incremental backups on all other nights. ServerB performs a full backup every Sunday night and differential backups on all other nights. Which statement is true?
- A. ServerA's backups consistently occupy more disk space than ServerB's.
 - B. If both servers must be recovered from backup on a Saturday afternoon, the recovery of ServerA will take less time.
 - C. ServerB's Friday backups take longer to complete than ServerA's.
 - D. Recovery of ServerB on a Monday morning will require restoration of two backups.
36. Which of the following commands can be used to refresh Group Policy on a remote machine?
- A. Gpupdate.exe
 - B. Start-GPUUpdate
 - C. Update-GroupPolicy
 - D. Invoke-GPUUpdate
37. You discover that the clocks on all domain-joined machines in your environment show the same incorrect time of day. Which domain controller is likely the source of this problem?
- A. The domain controller that holds the PDC Emulator FSMO role
 - B. The domain controller that holds the Infrastructure Master FSMO role
 - C. The domain controller that has the DNS Server role installed
 - D. The domain controller that has the Hyper-V role installed
38. A user reports on a Monday morning that they changed their domain password the previous Friday shortly before signing out. They're currently unable to log in, and they're not certain they remember the new password. You set a temporary password on the user's account and check the **User must change password at next logon** box, but the user reports that they still can't log in. What is the most likely reason?
- A. They're logging into a domain controller that has not yet received the temporary password.
 - B. Your own user account does not have permission to reset the user's password.
 - C. The user's workstation is having issues communicating with the domain and is attempting to log in using cached credentials.
 - D. The user's account has been locked out due to frequent failed logon attempts.

39. You run **repadmin /showrepl** on a domain controller to view its replication status, but you receive the error “Replication access was denied.” What is the most likely reason for this?
- A. The domain controller is the only one in the domain, so no replication is occurring.
 - B. The command was not run from an elevated command prompt.
 - C. The domain controller is not a global catalog.
 - D. Your account has not been granted the “Audit domain controller replication” user right.
40. You install the Windows Server Update Services (WSUS) role on a server in your domain and configure it to synchronize nightly with Microsoft. A week later, you check the WSUS console and discover that no computers are listed. What is the reason for this?
- A. The Windows Defender firewall on the WSUS server is blocking access.
 - B. You have not configured automatic approval rules for updates.
 - C. The appropriate Windows Update settings have not been configured in Group Policy.
 - D. The WSUS content database has consumed all the space on the C: drive.
41. Which RAID level provides increased read and write performance but will experience data loss if a single drive fails?
- A. RAID 10
 - B. RAID 5
 - C. RAID 1
 - D. RAID 0
42. Which two Group Policy settings work together to prevent a user who has just changed their domain password from changing it back to the previous password later in the day?
- A. Maximum password age and Minimum password age
 - B. Maximum password age and Account lockout duration
 - C. Minimum password age and Enforce password history
 - D. Enforce password history and Account lockout duration
43. Why is it undesirable to use audit policies that are too broad in scope?
- A. Repeated audit notifications can annoy users and interfere with tasks.
 - B. Audit events can quickly fill up the Security event log and consume considerable resources.
 - C. The default settings allow audit events to use all space on the C: drive without warning.
 - D. Auditing can deny users access to needed resources.
44. How much time will expire on a DHCP client’s lease before it broadcasts a renewal request to the local network?
- A. 50% of lease interval
 - B. 67% of lease interval
 - C. 75% of lease interval
 - D. 87.5% of lease interval

45. When per-device licensing is used in Remote Desktop Services, a device will receive a _____ CAL the first time it connects to a session host.
- A. temporary
 - B. flexible
 - C. user
 - D. permanent
46. You use the System File Checker (SFC) utility to restore a corrupted Windows file. In which folder does SFC generate a log of its activity?
- A. %systemroot%\WinSxS\Logs\
 - B. %systemroot%\Logs\CBS\
 - C. %systemroot%\SFC\
 - D. %systemroot%\Logs\SFC\
47. Restarting which service will re-register a domain controller's SRV records in DNS?
- A. File Replication Service
 - B. Netlogon
 - C. Kerberos Key Distribution Center
 - D. DNS Server
48. You need to create a virtual switch in Hyper-V that will allow a set of virtual machines on that host to communicate only with each other and nothing else. Which type of virtual switch should you use?
- A. Public
 - B. Internal
 - C. Private
 - D. External
49. Which firewall port must be open on a DNSSEC-enabled DNS server?
- A. TCP 443
 - B. TCP 25
 - C. UDP 443
 - D. UDP 53
50. Which command displays the group memberships of the current user?
- A. net user /groups
 - B. username /member
 - C. whoami /groups
 - D. msconfig /user
