# Server Administration using Microsoft (310)

## State 2024

### CONCEPT KNOWLEDGE:

Multiple Choice (50 @ 2 points each)

\_\_\_\_\_ (100 points)

### Test Time: 60 minutes

### Multiple Choice Questions

*Directions:* Identify the letter of the choice that best completes the statement or answers the question.

1. Which of the following best describes the purpose of password complexity requirements?
  - A. To make it easier for users to remember their passwords
  - B. To increase the security of user accounts
  - C. To prevent users from logging in
  - D. To slow down system performance
2. Which of the following password features enhances its complexity?
  - A. Using only lowercase letters
  - B. Including personal information (e.g., name or birthdate)
  - C. Incorporating a mix of uppercase and lowercase letters, numbers, and symbols
  - D. Using the same password for multiple accounts
3. What is the default port number used by the Windows DNS server for zone transfers?
  - A. 21
  - B. 53
  - C. 80
  - D. 123
4. If you want to delegate the management of virtual machines on a Hyper-V host to a user without granting full administrative rights, which option should you choose?
  - A. Add the user to the Remote Management Users group.
  - B. Add the user to the Server Operators group.
  - C. Use Local Security Policy to grant the user the Administer Virtual Machines user right.
  - D. Add the user to the Hyper-V Administrators group.
5. In Windows operating systems, which of the following is used to manage and configure network connections?
  - A. Control Panel
  - B. Task Manager
  - C. Command Prompt
  - D. Registry Editor
6. In a Windows domain environment, which of the following tools is used to centrally manage user accounts, security policies, and network resources?
  - A. Active Directory Users and Computers
  - B. Device Manager
  - C. Event Viewer
  - D. Windows PowerShell

7. What is the purpose of the Windows Hosts file?
  - A. To store user preferences and settings
  - B. To store network adapter configurations
  - C. To resolve domain names to IP addresses
  - D. To manage system processes and services
8. What is the syntax for adding an entry to the Windows Hosts file?
  - A. IP\_address hostname
  - B. hostname IP\_address
  - C. hostname=IP\_address
  - D. IP\_address:hostname
9. What is the primary advantage of RAID 6 over RAID 5?
  - A. RAID 6 provides more storage capacity.
  - B. RAID 6 allows for up to two disk failures.
  - C. RAID 6 is cheaper to implement.
  - D. RAID 6 has faster read and write speeds.
10. In a cybersecurity context, what does the principle of "least privilege" mean?
  - A. Every user must change their password at least once a month
  - B. Every user must be granted only those accesses that are essential to perform their duties
  - C. Every user must be monitored at all times while using the system
  - D. Every user must have access to all parts of the system in case of emergencies
11. What is the primary function of the Get-Command command in PowerShell?
  - A. To fetch and display all the installed PowerShell commands
  - B. To execute a specific PowerShell command
  - C. To install new PowerShell commands
  - D. To uninstall PowerShell commands
12. If you wanted to stop a process in PowerShell, what command would you use?
  - A. Stop-Command
  - B. Stop-Process
  - C. End-Process
  - D. Terminate-Process
13. How can a new task be started from the Task Manager?
  - A. By right-clicking on an empty space and choosing "Start new task"
  - B. By clicking "File" and then "Run new task"
  - C. By clicking on the "Performance" tab and then "New Task"
  - D. By clicking on the "Processes" tab and then "New Process"
14. What is Group Policy in the context of Windows Operating System?
  - A. It's a protocol to group applications
  - B. It's a feature that allows administrators to control the working environment
  - C. It's a software to make folders in Windows
  - D. It's a firewall setting

15. What tool is typically used to manage Group Policies?
  - A. Group Policy Management Console
  - B. Windows PowerShell
  - C. System Configuration
  - D. Disk Management
16. What is the purpose of "gpupdate /force" command?
  - A. To update the group policy manually
  - B. To force restart the computer
  - C. To install updates on all group policy objects
  - D. None of the above
17. If a user is a member of two groups that have contradictory policies, which policy will be applied?
  - A. The policy of the group the user joined first
  - B. The policy of the group the user joined last
  - C. The stricter of the two policies
  - D. The less strict policy
18. In Windows, the Local Group Policy Editor can be accessed by running what command?
  - A. gpedit.msc
  - B. gpmmc.msc
  - C. gplocal.msc
  - D. localgp.msc
19. What can an administrator use to ensure that a particular GPO is applied last?
  - A. Enforce option
  - B. Block Inheritance option
  - C. WMI Filtering
  - D. Loopback Processing
20. How can you modify the desktop wallpaper of all the computers in a domain using Group Policy?
  - A. Modify the "Desktop Wallpaper" setting in the User Configuration\Policies\Administrative Templates\Desktop\Desktop path of the GPO.
  - B. Add a script in the Windows startup folder to change the wallpaper.
  - C. Change the wallpaper manually on each computer.
  - D. Use the "Wallpaper" setting in the System Configuration panel.
21. Which of the following is used in Windows Server to manage and configure HTTP traffic?
  - A. Task Manager
  - B. Performance Monitor
  - C. Internet Information Services (IIS) Manager
  - D. Event Viewer

22. In Windows Server, what is the function of the Web Platform Installer?
- A. It installs the operating system on the server
  - B. It is used to install and configure web platform technologies on the server
  - C. It creates backups of the server
  - D. It provides firewall security for the server
23. When you need to troubleshoot an issue with a website on IIS, what should be your first step?
- A. Restart the server
  - B. Check the event logs
  - C. Increase the server's memory
  - D. Reinstall IIS
24. Which deployment tool allows administrators to create custom Windows Server images for deployment?
- A. Windows Assessment and Deployment Kit (ADK)
  - B. Windows Deployment Services (WDS)
  - C. Microsoft Deployment Toolkit (MDT)
  - D. Windows Server Update Services (WSUS)
25. Which tool is used to automate the deployment and configuration of Windows Server across multiple physical and virtual machines?
- A. Windows Admin Center (WAC)
  - B. System Center Configuration Manager (SCCM)
  - C. Microsoft Deployment Toolkit (MDT)
  - D. Active Directory Domain Services (AD DS)
26. Which deployment method is commonly used for deploying Windows Server updates and patches across a network?
- A. Windows Server Update Services (WSUS)
  - B. Windows Deployment Services (WDS)
  - C. System Center Configuration Manager (SCCM)
  - D. Active Directory Group Policy
27. Which deployment option is recommended for running Windows Server with a full graphical user interface (GUI)?
- A. Server with Desktop Experience
  - B. Nano Server
  - C. Server Core
  - D. Active Directory Lightweight Directory Services (AD LDS)
28. What tool should you use to check the replication status of Active Directory in Windows Server?
- A. Active Directory Sites and Services
  - B. Replication Monitor
  - C. Repadmin
  - D. DNS Manager

29. Which service should you check if a user is unable to authenticate in a domain?
- A. Kerberos Key Distribution Center
  - B. Windows Time
  - C. Print Spooler
  - D. Distributed Transaction Coordinator
30. You receive an error that a trust relationship has failed. Where is the issue likely located?
- A. The DNS settings
  - B. The computer account in Active Directory
  - C. The network connection
  - D. The hard drive space
31. If there is an issue with the Group Policy not applying properly, which tool can you use to troubleshoot this?
- A. Group Policy Update
  - B. Group Policy Management
  - C. Group Policy Results
  - D. Active Directory Users and Computers
32. What utility can you use to check the health of a domain controller?
- A. ntdsutil
  - B. netdom
  - C. dcdiag
  - D. dsquery
33. Which of the following statements is true about EFS encryption on a Windows Server?
- A. EFS encryption can only be applied to individual files and not to folders
  - B. EFS encryption requires a separate hardware device to manage the encryption keys
  - C. EFS encryption is transparent to users and applications accessing the files
  - D. EFS encryption can only be used on local drives and not on network drives
34. You want to back up an EFS-encrypted file on a Windows Server. Which of the following methods should you use to ensure the backup retains the encryption?
- A. Copy the file to an external hard drive using the file explorer
  - B. Use the built-in Windows Backup utility to create a system image
  - C. Export the EFS encryption certificate and include it in the backup
  - D. EFS-encrypted files cannot be backed up
35. Which of the following actions should you take if a user reports that their network print jobs are not being printed?
- A. Restart the print spooler service
  - B. Update the printer drivers
  - C. Reinstall the printer
  - D. Clear the print queue

36. Which printer deployment method allows administrators to manage printers and print queues using Group Policy?
- A. Network printer sharing.
  - B. Direct IP printing.
  - C. Printer pooling.
  - D. Point and Print deployment.
37. A user reports that they are unable to access a shared folder, but other users can access it without any issues. What should you check first to troubleshoot the problem?
- A. User's account status
  - B. User's password
  - C. Network connectivity
  - D. Shared folder permissions
38. You want to prevent users from accidentally deleting files in a shared folder. Which of the following permission levels should you assign to the users?
- A. Full Control
  - B. Modify
  - C. Read
  - D. Write
39. A user accidentally deleted an important file from a shared folder. What is the best course of action to recover the file?
- A. Restore the file from a recent backup.
  - B. Check the Recycle Bin on the user's computer.
  - C. Use file recovery software to retrieve the deleted file.
  - D. Contact the system administrator for assistance.
40. What tool can be used to recover system state data in Windows 10, Windows 11, and Windows Server?
- A. System Restore
  - B. Control Panel
  - C. Device Manager
  - D. Disk Cleanup
41. Which feature in Windows Server allows you to recover user data in case of accidental deletion?
- A. Volume Shadow Copy Service (VSS)
  - B. Windows Backup
  - C. File History
  - D. Recycle Bin
42. Which command can you use to recover system state data in Windows Server from the command line?
- A. sfc /scannow
  - B. chkdsk /f
  - C. dism /online /cleanup-image /restorehealth
  - D. wbadmin start systemstaterecovery

43. To deploy software using Group Policy, which file format should you use to create the software distribution package?
- A. .msi
  - B. .exe
  - C. .rar
  - D. .zip
44. Which Group Policy setting allows you to prevent users from installing software packages?
- A. Prohibit software installation
  - B. Remove software installations
  - C. Restrict software installation
  - D. Deny software deployment
45. Which policy setting in Group Policy allows you to force software installations during computer startup?
- A. Assign software installation on startup
  - B. Force software deployment during boot
  - C. Install software during system startup
  - D. Assign software via startup scripts
46. Which role in Windows Server provides the ability to manage and control network traffic between subnets and enforce security policies?
- A. DHCP Server
  - B. Network Policy and Access Services
  - C. Remote Desktop Services
  - D. Print and Document Services
47. Which troubleshooting technique in IIS allows administrators to temporarily disable website functionality or components for diagnostic purposes?
- A. Failed Request Tracing
  - B. Remote Desktop Connection
  - C. Application Pool Recycling
  - D. Debugging Tools for Windows
48. Which feature in IIS allows administrators to restrict access to a website based on IP addresses or domain names?
- A. URL Rewrite
  - B. Authorization Rules
  - C. Request Filtering
  - D. HTTP Redirect

49. Which troubleshooting tool in Windows Server allows administrators to view and analyze network traffic and capture packets for diagnostic purposes?
- A. Network Monitor
  - B. Performance Monitor
  - C. Event Viewer
  - D. Resource Monitor
50. Which Windows Server feature allows administrators to create virtual network adapters, enabling communication between virtual machines and the physical network?
- A. Hyper-V
  - B. DNS Server
  - C. Network Load Balancing (NLB)
  - D. Routing and Remote Access
