Multiple Choice (50 @ 2 points each)

_____ (100 points)

Test Time: 60 minutes

Multiple Choice Questions

Directions: Identify the letter of the choice that best completes the statement or answers the question.

1. What is the primary function of system optimization tools on a Windows server?
 - A. To decrease system speed
 - B. To uninstall applications
 - C. To change system settings
 - D. To improve system performance and reliability
2. How can system performance be optimized by managing system startup programs on a Windows server?
 - A. By disabling unnecessary programs
 - B. By increasing all program priorities
 - C. By deleting system files
 - D. By reinstalling the operating system
3. In the event of system failure, what is the importance of creating a system recovery image on a Windows server?
 - A. To restore the entire system to a functional state
 - B. To increase system complexity
 - C. To decrease system speed
 - D. To delete all user accounts
4. What is the recommended approach to recovering user data on a Windows server after accidental deletion?
 - A. Increasing system resource usage
 - B. Disabling automatic backups
 - C. Deleting all system files
 - D. Using data recovery software
5. How can system reliability be enhanced on a Windows server through regular system maintenance tasks?
 - A. By scheduling regular system backups
 - B. By disabling system updates
 - C. By removing all user accounts
 - D. By increasing system complexity
6. When monitoring system performance, what is the primary benefit of tracking system resource usage on a Windows server?
 - A. Increasing system speed
 - B. Identifying potential performance bottlenecks
 - C. Deleting system files
 - D. Disabling system notifications

7. What is the primary purpose of system monitoring tools on a Windows server in relation to system performance?
 - A. To decrease overall system reliability
 - B. To provide real-time data on system resource usage
 - C. To uninstall critical applications
 - D. To disable system notifications
8. How can system performance be optimized by managing virtual memory on a Windows server?
 - A. By adjusting the virtual memory settings
 - B. By increasing all virtual memory allocations
 - C. By disabling virtual memory
 - D. By running fewer applications simultaneously
9. In the context of system reliability, what is the importance of regular system backups on a Windows server?
 - A. To prevent data loss in case of system failure
 - B. To decrease system security
 - C. To increase system complexity
 - D. To optimize system speed
10. How can system performance be monitored in real-time on a Windows server to identify potential issues?
 - A. By using Performance Monitor
 - B. By disabling system updates
 - C. By uninstalling critical applications
 - D. By increasing system resource usage
11. What is the recommended method to optimize system performance on a Windows server by managing system services?
 - A. By increasing the number of services
 - B. By deleting system files
 - C. By disabling unnecessary services
 - D. By ignoring system error messages
12. When troubleshooting desktop environment issues, what is the first step to take when a user reports missing icons on the taskbar?
 - A. Restart the computer
 - B. Reinstall the operating system
 - C. Check the recycle bin
 - D. Update the sound driver

13. How can system reliability be improved by regularly updating system drivers on a Windows server?
- A. By decreasing system security
 - B. By ensuring compatibility with hardware and software
 - C. By ignoring system errors
 - D. By reducing system complexity
14. What is the primary purpose of Encrypting File System (EFS) in encrypting data on a Windows server hard disk?
- A. To protect sensitive information from unauthorized access
 - B. To compress data for storage
 - C. To reduce system speed
 - D. To increase file sharing
15. In the context of system performance, how can disk cleanup tools help optimize a Windows server?
- A. By increasing system memory usage
 - B. By deleting system drivers
 - C. By disabling system notifications
 - D. By removing temporary files and optimizing disk space
16. What is the benefit of configuring automatic backups to recover user data on a Windows server?
- A. Ensuring data recovery in case of system failure
 - B. Decreasing system performance
 - C. Disabling data encryption
 - D. Increasing system speed
17. You are tasked with monitoring website access. A user reports they can't access a specific site. What is the first step you should take?
- A. Restart the server
 - B. Flush DNS cache
 - C. Check browser settings
 - D. Check firewall settings
18. A hardware device is not recognized by the system. What should you do first to troubleshoot the issue?
- A. Update device drivers
 - B. Restart the computer
 - C. Check device manager
 - D. Replace the device

19. You need to control access to a website for a specific group of users. Which tool would you use for this task in Windows Server?
- A. Device Manager
 - B. Control Panel
 - C. Task Manager
 - D. Active Directory
20. A user reports slow network connectivity. What should you check first to troubleshoot the Windows network connection issue?
- A. IP address configuration
 - B. Network adapter status
 - C. Router settings
 - D. DNS server configuration
21. You suspect a driver conflict is causing system issues. What is the best way to troubleshoot this problem?
- A. Update drivers for all devices
 - B. Roll back recent driver updates
 - C. Disable all drivers
 - D. Reinstall Windows operating system
22. How can you monitor website traffic on a Windows Server?
- A. Use Performance Monitor tool
 - B. Check Event Viewer
 - C. Run ipconfig command
 - D. Monitor Task Manager
23. A user complains about no sound coming from their computer. What should be your initial troubleshooting step?
- A. Reinstall Windows OS
 - B. Update sound card driver
 - C. Check volume settings
 - D. Replace the speakers
24. A website hosted on your server is experiencing downtime. What tool can you use to identify the root cause?
- A. Network Monitor
 - B. Resource Monitor
 - C. Event Viewer
 - D. Task Scheduler

25. How can you troubleshoot a slow website loading issue on a Windows Server?
- A. Check server CPU usage
 - B. Clear browser cache
 - C. Restart the website
 - D. Review network latency
26. A new printer is not printing correctly. What should you do first to troubleshoot the printer driver issue?
- A. Reinstall the printer driver
 - B. Check printer spooler service
 - C. Replace the printer
 - D. Update the operating system
27. You suspect a website is being blocked by a firewall. What is the best approach to troubleshoot this issue?
- A. Check firewall logs
 - B. Restart the website
 - C. Update the web server software
 - D. Check network cables
28. An external hard drive is not recognized by the system. What should you check to troubleshoot this hardware device issue?
- A. Network adapter settings
 - B. Processor speed
 - C. Drive letter assignment
 - D. RAM availability
29. You need to configure a new network connection in Windows. Which Control Panel option should you access for this task?
- A. Windows Update
 - B. System Properties
 - C. Device Manager
 - D. Network and Sharing Center
30. A user is unable to access a shared network folder. What should you check to troubleshoot this Windows network connection issue?
- A. Network permissions
 - B. Monitor CPU usage
 - C. Check browser history
 - D. Clear DNS cache

31. How can you troubleshoot a website redirecting to the wrong page on a Windows Server?
- A. Check website code
 - B. Clear browser cookies
 - C. Restart the web server
 - D. Run Windows Update
32. A user reports frequent system crashes after installing new hardware. What is the first step to troubleshoot this hardware device issue?
- A. Replace the hardware
 - B. Check event logs
 - C. Update BIOS
 - D. Reinstall Windows OS
33. You need to restrict access to a specific website for all users on a Windows Server. Which feature should you configure?
- A. Content filtering
 - B. Firewall rules
 - C. Proxy server settings
 - D. VPN configuration
34. A user experiences display issues after updating graphics drivers. What is the recommended troubleshooting step?
- A. Update the OS
 - B. Replace the graphics card
 - C. Roll back the driver update
 - D. Reinstall the display drivers
35. What is the primary purpose of monitoring website access on a Windows Server?
- A. Ensure security compliance
 - B. Improve server performance
 - C. Enhance user experience
 - D. Reduce network latency
36. An external webcam is not working on a Windows system. What should you check first to troubleshoot this hardware device issue?
- A. Device Manager
 - B. Check webcam cable connections
 - C. Update the operating system
 - D. Restart the computer

37. How can you troubleshoot a network connection issue where the system shows "Limited Connectivity" in Windows?
- A. Reset router settings
 - B. Check IP address configuration
 - C. Update network adapter drivers
 - D. Restart the DHCP service
38. You suspect a website is infected with malware. What tool can you use to scan and remove malware on a Windows Server?
- A. Windows Defender
 - B. Task Manager
 - C. Disk Cleanup
 - D. Event Viewer
39. A user reports slow internet speeds. What should you check first to troubleshoot the Windows network connection issue?
- A. Network adapter settings
 - B. System BIOS settings
 - C. Browser cache
 - D. Screen resolution settings
40. What is the purpose of configuring hardware devices and drivers on a Windows Server?
- A. Ensure optimal device performance
 - B. Enhance server security
 - C. Improve network speed
 - D. Reduce system memory usage
41. A new mouse is not responding when connected to a Windows system. What should you check first to troubleshoot this hardware device issue?
- A. Device Manager
 - B. Replace the mouse
 - C. Update the mouse driver
 - D. Restart the system
42. You need to troubleshoot a network connection issue where multiple devices are unable to connect to the internet. What should you check?
- A. Router settings
 - B. Wi-Fi signal strength
 - C. Network adapter status
 - D. DNS server configuration

43. A user reports that a printer is printing blank pages. What is the likely cause of this issue related to hardware devices and drivers?
- A. Outdated printer driver
 - B. Faulty printer cable
 - C. Low printer toner level
 - D. Printer spooler service not running
44. How can you control access to specific websites for a group of users on a Windows Server?
- A. Set up group policies
 - B. Update system BIOS
 - C. Configure DHCP settings
 - D. Change firewall settings
45. You are unable to connect to a shared network drive on a Windows system. What should you check first to troubleshoot this network issue?
- A. Check browser history
 - B. Network permissions
 - C. Monitor CPU usage
 - D. Clear DNS cache
46. What is the primary benefit of configuring and troubleshooting Windows network connections on a Windows Server?
- A. Enhance network security
 - B. Improve device compatibility
 - C. Optimize server performance
 - D. Reduce server storage usage
47. An external hard drive is not recognized by the system. What should you check to troubleshoot this hardware device issue?
- A. Drive letter assignment
 - B. Network adapter settings
 - C. Processor speed
 - D. RAM availability
48. You need to configure a new network connection in Windows. Which Control Panel option should you access for this task?
- A. Device Manager
 - B. Network and Sharing Center
 - C. Windows Update
 - D. System Properties

49. A user is unable to access a shared network folder. What should you check to troubleshoot this Windows network connection issue?
- A. Network permissions
 - B. Monitor CPU usage
 - C. Check browser history
 - D. Clear DNS cache
50. How can you troubleshoot a website redirecting to the wrong page on a Windows Server?
- A. Check website code
 - B. Run Windows Update
 - C. Clear browser cookies
 - D. Restart the web server
