Server Admin Using Microsoft (310)

STATE 2025

CONCEPT KNOWLEDGE:

Multiple Choice (50 @ 2 points each)

_____ (100 points)

Test Time: 60 minutes

Multiple Choice Questions

Directions: Identify the letter of the choice that best completes the statement or answers the question.

1. A user is unable to access a shared folder on the network. Which of the following tools would be most helpful in troubleshooting this issue?
 - A. Event Viewer
 - B. Task Manager
 - C. Resource Monitor
 - D. Disk Cleanup
2. A user is unable to access a specific folder on a shared drive, but can access other folders without any issues. Which of the following could be the cause of this problem?
 - A. Server hardware failure
 - B. Outdated operating system
 - C. Incorrect permissions
 - D. Network cable unplugged
3. A user reports they are unable to connect remotely to the server. Which of the following steps should you take first to troubleshoot the issue?
 - A. Restart the server
 - B. Check firewall settings
 - C. Check network cables
 - D. Update the server software
4. A user's Windows 10 computer fails to boot after a recent update. What is the initial step to troubleshoot this issue?
 - A. Perform a system restore
 - B. Update device drivers
 - C. Check for Windows updates
 - D. Reinstall Windows 10
5. An administrator needs to encrypt sensitive data on a hard disk using Encrypting File System (EFS). What is the correct procedure to enable EFS encryption?
 - A. Right-click the file or folder, select Properties, click Advanced, and check Encrypt contents to secure data
 - B. Use Command Prompt to encrypt the entire disk
 - C. Install third-party encryption software
 - D. Enable BitLocker encryption

6. An external hard drive is not recognized by the system. What should you check to troubleshoot this hardware device issue?
 - A. Network adapter settings
 - B. Processor speed
 - C. RAM availability
 - D. Drive letter assignment
7. An external webcam is not working on a Windows system. What should you check first to troubleshoot this hardware device issue?
 - A. Device Manager
 - B. Check webcam cable connections
 - C. Update the operating system
 - D. Restart the computer
8. During the installation of Windows Server 2019, the system encounters an error "Bootmgr is missing". What could be a possible cause of this error?
 - A. Corrupted installation media
 - B. Insufficient RAM
 - C. Outdated BIOS firmware
 - D. Low disk space
9. How can system performance be optimized by managing virtual memory on a Windows server?
 - A. By reducing available RAM
 - B. By increasing the paging file size
 - C. By disabling virtual memory
 - D. By running multiple applications simultaneously
10. How can system reliability be enhanced on a Windows server through automated maintenance tasks?
 - A. By scheduling regular system backups
 - B. By disabling automatic updates
 - C. By removing all user accounts
 - D. By increasing system resource usage
11. How can system reliability be improved by regularly updating system drivers on a Windows server?
 - A. By ensuring compatibility with hardware and software
 - B. By decreasing system security
 - C. By ignoring system errors
 - D. By reducing system complexity

12. How can the desktop environment be configured to improve user productivity on a Windows server?
- A. By customizing desktop shortcuts
 - B. By removing all desktop icons
 - C. By disabling the Start menu
 - D. By changing the system language
13. How can you control access to specific websites for a group of users on a Windows Server?
- A. Update system BIOS
 - B. Configure DHCP settings
 - C. Change firewall settings
 - D. Set up group policies
14. How can you optimize system performance by managing startup programs on a Windows server?
- A. Increase the number of startup programs
 - B. Disable unnecessary startup programs
 - C. Run all programs at startup
 - D. Reset the system to factory settings
15. How can you release and renew an IP address in Windows?
- A. `ipconfig /release`, `ipconfig /renew`
 - B. Restart the computer
 - C. Unplug the network cable
 - D. Change the DNS settings
16. How can you restore the registry from a backup in Windows Server?
- A. System Restore
 - B. Recovery Console
 - C. Control Panel
 - D. Registry Editor
17. In a Windows environment, what should you configure to restrict access to specific applications based on user roles?
- A. Group Policy
 - B. Network Address Translation (NAT)
 - C. Windows Firewall
 - D. Access Control Lists (ACLs)
18. In a Windows environment, which setting should be configured to enforce password complexity requirements on user accounts?
- A. Local Security Policy
 - B. Task Scheduler
 - C. Device Manager
 - D. Control Panel

19. In the context of system performance, how can disk cleanup tools help optimize a Windows server?
- A. By increasing system memory usage
 - B. By removing temporary files and optimizing disk space
 - C. By deleting system drivers
 - D. By disabling system notifications
20. In the context of system reliability, what is the importance of regular system backups on a Windows server?
- A. To decrease system security
 - B. To increase system complexity
 - C. To optimize system speed
 - D. To prevent data loss in case of system failure
21. In the event of system failure, what is the importance of creating a system recovery image on a Windows server?
- A. To restore the entire system to a functional state
 - B. To increase system complexity
 - C. To decrease system speed
 - D. To delete all user accounts
22. The server experiences frequent crashes due to overheating. What action should the administrator take to improve system reliability?
- A. Install additional cooling fans
 - B. Update the BIOS firmware
 - C. Increase CPU clock speed
 - D. Disable system notifications
23. To enhance security on a Windows Server, which of the following should you configure to restrict access based on IP addresses?
- A. Windows Defender Firewall rules
 - B. Network Address Translation (NAT) rules
 - C. Remote Desktop Gateway settings
 - D. Access Control Lists (ACLs)
24. Users are reporting that they are unable to print to a network printer. Which of the following steps should you take first to troubleshoot this issue?
- A. Check printer connectivity
 - B. Reinstall the printer
 - C. Update printer firmware
 - D. Reboot the server

25. A new printer is not printing correctly. What should you do first to troubleshoot the printer driver issue?
- A. Check printer spooler service
 - B. Reinstall the printer driver
 - C. Replace the printer
 - D. Update the operating system
26. A user reports slow network connectivity. What should you check first to troubleshoot the Windows network connection issue?
- A. IP address configuration
 - B. Network adapter status
 - C. Router settings
 - D. DNS server configuration
27. Can EFS be used for encrypting network shares?
- A. Yes
 - B. Sometimes
 - C. Only on weekends
 - D. No
28. How can administrators ensure that Group Policy changes are applied immediately to client computers in a Windows Server domain?
- A. Restart the server
 - B. Run GPUpdate command
 - C. Reinstall Windows
 - D. Clear DNS cache
29. When implementing auditing on a Windows Server, which feature should you enable to track changes made to files and folders?
- A. Account Management Auditing
 - B. Object Access Auditing
 - C. Logon/Logoff Auditing
 - D. Policy Change Auditing
30. Which command is used to copy a file from one location to another in the command line interface?
- A. move
 - B. xcopy
 - C. copy
 - D. paste

31. Which command is used to display a list of files and subdirectories in a directory in the command line interface?
- A. dir
 - B. ls
 - C. list
 - D. show
32. Which of the following is a best practice for securing inbound connections to a Windows server?
- A. Opening all ports for convenience
 - B. Implementing a firewall
 - C. Enabling encryption
 - D. Disabling authentication
33. Which of the following policies should be configured to enforce complex password requirements on a Windows Server?
- A. Account Lockout Policy
 - B. Password Policy
 - C. Security Policy
 - D. Audit Policy
34. Which protocol is commonly used to configure website access control?
- A. FTP
 - B. SMTP
 - C. HTTP
 - D. SSH
35. Which security setting should be configured to prevent unauthorized software installations on a Windows Server?
- A. Windows Defender Firewall rules
 - B. AppLocker settings
 - C. Remote Desktop Gateway settings
 - D. BitLocker Drive Encryption settings
36. Which setting should be configured to enable Network Level Authentication (NLA) for remote desktop connections on a Windows Server?
- A. Remote Desktop Connection settings
 - B. Advanced Security Settings
 - C. Local Security Policy
 - D. Windows Defender Firewall settings

37. A hardware device is not recognized by the system. What should you do first to troubleshoot the issue?
- A. Update device drivers
 - B. Restart the computer
 - C. Check device manager
 - D. Replace the device
38. A user reports frequent system crashes after installing new hardware. What is the first step to troubleshoot this hardware device issue?
- A. Check event logs
 - B. Replace the hardware
 - C. Update BIOS
 - D. Reinstall Windows OS
39. When configuring inbound connections on a Windows Server, which protocol is commonly used for secure remote access?
- A. FTP
 - B. HTTP
 - C. SSH
 - D. RDP
40. Which command is used to display the current directory path in the command line interface in Windows?
- A. showpath
 - B. pwd
 - C. path
 - D. displaypath
41. Which policy should be configured to specify the level of encryption required for secure network communications on a Windows Server?
- A. Encryption Policy
 - B. Password Policy
 - C. Security Policy
 - D. Audit Policy
42. Which security feature in Windows Server 2019/2022 helps protect against unauthorized access to sensitive data?
- A. Windows Defender
 - B. Windows Firewall
 - C. BitLocker
 - D. Cortana

43. Which Windows OS versions support EFS?
- A. Windows XP Home
 - B. Windows Vista
 - C. Windows 10 Pro
 - D. Windows 7 Professional
44. You need to allow remote access to a specific database application on the server. Which feature should you configure to enable this access?
- A. SQL Server Management Studio
 - B. Task Scheduler
 - C. Remote Desktop Services
 - D. Windows Defender Antivirus
45. You need to monitor remote access connections to the server in real-time. Which tool should you use to view active sessions and users?
- A. Task Manager
 - B. Event Viewer
 - C. Remote Desktop Services Manager
 - D. Resource Monitor
46. A user is experiencing slow remote access to the server. Which tool can you use to identify network latency issues affecting the connection?
- A. netstat
 - B. ipconfig
 - C. ping
 - D. tracert
47. In Windows environments, what is the purpose of the Local Security Policy?
- A. Setting user permissions
 - B. Managing network shares
 - C. Configuring firewall rules
 - D. Enforcing password policies
48. Users report that desktop icons are missing on their computers. What could be a potential solution to troubleshoot this issue?
- A. Restart the desktop environment
 - B. Reinstall the operating system
 - C. Check desktop icon settings
 - D. Reset user profiles

49. Which of the following should you configure to restrict access to a specific resource on a Windows Server based on user permissions?
- A. Group Policy
 - B. Network Address Translation (NAT)
 - C. Windows Firewall
 - D. Access Control Lists (ACLs)
50. Which setting should be configured to enable Secure Socket Layer (SSL) encryption for web applications on a Windows Server?
- A. Advanced Security Settings
 - B. Remote Desktop Connection settings
 - C. Local Security Policy
 - D. Internet Information Services (IIS) settings
